

General: Evergreen perennial; 2'-6' tall

Stems are round and rigid

Need new seedling image

Form: Tufted

Seedheads form below the tip of the stem

Photo by Heidi Bohan

Native Look-alike

Tapered rush, Juncus acuminatus, is similar but the flowering clusters occur at the end of the stalk. Note: *Juncus effuses* has many sub-species including a native, less aggressive variety that is very difficult to differentiate.

Juncus acuminatus

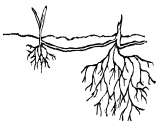

Photo by Heidi Bohan

Management Strategies

- Rhizomatous roots: Remove major
- Primary spread: Seed, rhizomes

Common or Soft Rush

Juncus effusus

A Non-native & Native Plant

Check with parks department or school district for proper disposal.
